INTRODUCTION

The development, operation and maintenance of parks and campgrounds are dynamic processes requiring continuous decision-making by individuals, planners, Provincial and Federal Governments and their agencies.

The making of pertinent decisions that mesh with the particular needs within a park or campground and are in harmony with regional developmental objectives is very critical. This process involves all levels of planning.

Basic to making pertinent decisions is the availability of adequate and accurate information. Essential also is the ability of decision-makers to analyse the figures and assess the facts before designing projects and preparing programs.

This document's format has been designed to allow for easy analysis of the data. Tables herein are arranged in four major categories in each regional subdivision section: Recreational Facilities, Attendance Statistics, Visitor Services Statistics, and Campground Statistics.

The category on Recreational Facilities provides a quick look at each individual campground and an overview of the recreational facilities of that particular region.

The Attendance Statistics are traffic counts by gate for that particular region, and comparative attendance, park entrance permits and revenue figures for the past four years.

The Visitor Services Statistics indicate the types of programs provided and the estimated contacts with the public through services and facilities.

The Campground Statistics consist of tables compiled from information on the camping permits sold by each campground, and a set of occupancy rates based on the data collected from the various campgrounds. The percentage occupancy was calculated on the number of sites available, excluding the seasonal sites and the overflow area, using the total number of operating days established.

This is the thirteenth year of publication of this document. Due to the availability of more reliable data now some of the figures for comparative years may be inconsistent with that in previous publications. The latest figures published should be used as better sources of information have been made available since the last publication. Since the first publication the boundaries of the regions which form the sections of this manual have changed many times, and the shifting of regional responsibility for campgrounds has also occurred. It is therefore not possible to compare regional totals from publication to publication. However, it is possible to compare the Provincial totals.

The need still exists for more reliable information to make this document a more useful source, but each year it becomes more complete and precise. This document is unique in terms of the detail of data and style of its presentation. It is expected to make a significant contribution towards the development of parks and campgrounds in the Province.
